

Application No.: 10/064,830

Docket No.: JCLA9625

REMARKS**Present Status of the Application**

In the final response phrase of the present invention, an copy of amended claims are was submitted in which the independent claim 1 has been amended without prejudice or disclaimer in order to more explicitly describe the claimed invention. It is believed that no new matter is added by way of amendments made to the independent claim 1. For at least the foregoing reason, applicants respectfully submit that claims 1-13 patently define over prior art of record and reconsideration of this application is respectfully requested.

Discussion for a new issue occurring in the amended claim

The claim 1 was amended to include" "an electronic controller ~~to control~~ for controlling complementary charge and complementary discharge between said battery element and said capacitor element"(where the underlined portion stands for being added while striking though portion stands for being deleted). Evidently, the use of the phrase of "to control" is due to a clerical error, and thus replaced by the phrase "for controlling." Accordingly, this replacement is not intended to enlarge the claim scope of the "an electronic controller," which is believed to raise a new issue as alleged by the examiner. In our opinion, the reason why the examiner alleged this replacement raises a new issue is because it is expedient for him/her. Nevertheless, applicant proceeds to file request for continuous examination.

Application No.: 10/064,830

Docket No.: JCLA9625

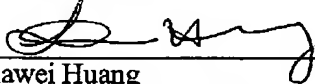

CONCLUSION

For at least the foregoing reasons, it is believed that all the pending claims 1-13 of the present application patently define over the prior art and are in proper condition for allowance. If the Examiner believes that a telephone conference would expedite the examination of the above-identified patent application, the Examiner is invited to call the undersigned.
